Despite market stagnation, development company Erste Group Immorent continues to develop pan-European network of logistics parks under the brand Immopark. Construction of Immopark Košice project is underway and nearly 120 million EUR will be invested there. According to Peter Malík, executive director of the company, the main communication and engineering networks are already completed and construction of halls for future tenants starts this week. The new industrial park will provide 250,000 sqm suitable for logistics, distribution, light industry and office space. It will cover an area of 60 ha between the international airport and the motorway Košice - Bratislava. The first phase of construction will be completed later this year. "Our Immopark network is growing not only here in Košice, but we are also very active in Prague, Žilina and in the Croatian capital of Zagreb," said Milan Zikmund, Director of Construction Services Erste Group Immorent ČR s.r.o.
